ACADEMICIA

An International Multidisciplinary Research Journal

ISSN (online) : 2249 -7137

Editor-in-Chief : Dr. B.S. Rai

Impact Factor : SJIF 2020 = 7.13

Frequency : Monthly

Country : India

Language : English

Start Year : 2011

Indexed/ Abstracted : Scientific Journal Impact Factor (SJIF2020 - 7.13), Google Scholar, CNKI Scholar, EBSCO Discovery, Summon (ProQuest), Primo and Primo Central, I2OR, ESJI, IJIF, DRJI, Indian Science and ISRA-JIF and Global Impact Factor 2019 - 0.682

E-mail id: saarjournal@gmail.com

VISION

The vision of the journals is to provide an academic platform to scholars all over the world to publish their novel, original, empirical and high quality research work. It propose to encourage research relating to latest trends and practices in international business, finance, banking, service marketing, human resource management, corporate governance, social responsibility and emerging paradigms in allied areas of management including social sciences , education and information & technology. It intends to reach the researcher's with plethora of knowledge to generate a pool of research content and propose problem solving models to address the current and emerging issues at the national and international level. Further, it aims to share and disseminate the empirical research findings with academia, industry, policy makers, and consultants with an approach to incorporate the research recommendations for the benefit of one and all.

ACADEMICIA

An International Multidisciplinary Research Journal

(Double Blind Refereed & Peer Reviewed Journal)

ABSTRACT

The article examines the features of the formation and development of settlements on the territory of Uzbekistan. The significance of territorial, historical, social and economic-geographic factors influencing the development of settlements, including cities, the possibility of creating modern settlements will be studied. In order to support the views and conclusions presented in the article, the number of settlements in the country's regions, their role and importance in the territorial distribution of the country's population are shown in tables and diagrams.

KEYWORDS: *Settlements, The Great Silk Road, Ancient Cities, Historical Factors, Territorial Factors, Economic System, Territorial Distribution Of The Population, Urbanization, Classification.*

INTRODUCTION

The urban system in Uzbekistan has a long history. The Great Silk Road, founded in the II century BC, led to strong trade, cultural and social ties between the ancient states of Europe and Asia, and the territory of Uzbekistan served as an important center of these relations. Thus, caravans from both continents influenced the economic life and socio-cultural development of the population in this region. The development of settlements, especially cities, was associated with the functioning of this trade route until the Middle Ages. The emergence of large cities on the territory of Uzbekistan dates back to the second millennium BC. The oldest cities are formed in the middle and lower reaches of the Amu Darya and Sir Darya rivers. The history of the region's great powers goes back thousands of years. The lifestyle, ethnic, linguistic and religious

composition of the region's population has also changed over time. Therefore, social development in this region is not going in one direction, as in other regions of the world, but is very unstable; crises are growing and constantly changing. The same can be said about the development of cities in the region, architecture, urban planning, its role in the development of society.

While recognizing that there are many ancient cities in the region, it is important to note that new cities and new urban planning principles have emerged in the twentieth century. During this period, the role of cities in the system of transport, industry and settlement began to increase and served as the basis for the industrial development of the countries of the region. Therefore, in the geographical classification of cities in the region, it is advisable to pay attention not only to their territorial location, but also to their historical, political and socio-economic significance. Therefore, the description of the cities of Uzbekistan can be historical, geographical, and socio-economic.

MATERIALS AND METHODS

The development of settlements in Uzbekistan is associated with the improvement of the economic system. In ancient times, the formation of irrigated agriculture in the fertile valleys of the Amu Darya and Sir Darya basins led to the emergence of a system of villages and cities. Caravan services and trade links along the Great Silk Road increased the number and scale of cities. During ancient and medieval times, Central Asia was home to some of the most developed cities in the world.

The origins of urban planning in Uzbekistan go back to ancient times. Ancient Greek historians have written extensively about cities in prehistoric times. Historical sources about the campaigns of Alexander the Great also contain information about the rich cities of Khorezm and Sogdiana. The early middle Ages were the heyday of urban development and urban economy in Uzbekistan. Along with the ancient cities known to us, such as Samarkand, Bukhara, Tashkent, Urgench, the settlements, which are now small towns or even villages, have played an important role in the economic and social development and settlement of the region. For example, Varakhsha in Bukhara, Chust in Namangan and others.

Geographic study of the cities of Uzbekistan was widespread during the early middle Ages and the Eastern Renaissance. In particular, al-Khwarizmi in his book "Surat ul-Arz (Map of the Earth)" gave the geographical coordinates of many cities. Historians such as Jaykhani and Balkhi have also described the cities of the region. Abu Raykhan Beruni in his books "Osor ul Bakiya" (Monuments of the past) ", "Geodesy" gave a geographical description of cities and villages in the region. In the book, "Ziji Jadidi Koragoniy" Ulugbek gives the geographical coordinates of 570 cities.

In the middle Ages, Zakhiriddin Muhammad Babur, with his work "Boburnoma", made a significant contribution to geography, as well as to many other sciences. Babur places great emphasis on precision and detail in country descriptions and highlights wonderful details. He gives a very interesting and detailed description of the cities he visited, especially in Uzbekistan. In these images, the image of Andijan and Samarkand is of particular importance. For example, archaeologists learned from the descriptions of Bobur, from which side of Samarkand to look for the remains of Ulugbek's observatory. From various historical sources and archaeological sites, we can learn about the cities that were once of great importance in the region. For example, the

city of Otrar was located near the modern city of Taraz and was a major center on the Great Silk Road before the Mongol invasion.

Because the economic system and culture of the region are based on agriculture, there were no significant changes in the process of urbanization in the territory of Uzbekistan before the Russian occupation of Turkestan. Because of the establishment of Russian power in Turkestan, the development of railway transport and industry began. As a result, cities with a special purpose were built. The main functions of these cities are railway stations and administrative and housing complexes. For example: the cities of Kagan in the Bukhara region, Turtkul in the Republic of Karakalpakstan (called Petro-Aleksandrovsk during construction), Bakht (Velikoalekseevsk) in the Syrdarya region. Large settlements have been built, such as Angren in Tashkent, Fergana (Skobelev) in the Fergana region and a number of other small cities of transport and industrial importance. The growth of industry in the former Soviet Union also led to a change in the territorial distribution of the republic's population in accordance with the formation of industry and transport. The location and development of settlements depends on these factors.

Because of the growth of industry in Uzbekistan, there have been significant positive changes in the distribution of the country's population between urban and rural areas. That is, the city's population grew rapidly. If in 1897 18.8% of the population of Uzbekistan lived in cities, then in 1926 this figure increased to 22%, in 1940 - 24.5%, in 1959 - 33.6%, in 1970 - 36.6%. It reached 41.2% in 1979 and 40.7% in 1989, and since 2009, the share of the urban population was 51.7%. However, in recent years, the urbanization process has slowed down, so by the beginning of 2020, the urbanization level in the country will be 50.5%.

TABLE 1 PERIODIC RATIO OF URBAN AND RURAL POPULATION IN UZBEKISTAN

years	Population (thousand people)		average annual growth%		Urbanization level %
	city	village	city	village	
1865	466	2854	-	-	14
1897	743	3205	7.5	0.4	18.8

Factors affecting the development of settlements on the territory of Uzbekistan now are population growth, expansion of agricultural sectors, development of industrial enterprises and transport. The successful development of the desert in the second half of the 20th century expanded the irrigated area and formed a new system of settlements. Accordingly, the expansion of the agricultural sector is still seen as a factor influencing the formation of new settlements in these areas.

The development of urban settlements is accelerating due to the growing importance of industry in the economic system. Consequently, as the foundations of the economic, social and political development of cities and towns in Uzbekistan grew during the twentieth century, cities in Uzbekistan also grew rapidly.

In 1926, there were 27 cities and 19 villages in Uzbekistan, and in 1991 - 123 cities and 104 villages. After the government's decision in 2009 to grant the status of urban settlements, the number of 119 cities has reached 199, the number of cities - 1080, and the number of villages - 10 865. In recent years, some changes will occur in these figures.

Source: UzR. Data from the State Statistics Committee.

In recent years, much attention has been paid to the regional development of settlements in our country. To improve the living standards of the population, to ensure all amenities, land plots are allocated; modern housing is being built in cities and villages. This process emphasizes the relevance of studying the proportional formation of the settlement system in the regions.

TABLE 2 INFORMATION ABOUT SETTLEMENTS IN THE REGIONS OF THE REPUBLIC OF UZBEKISTAN

regions	Number of cities	Number of towns.	Number of villages.
Republic of Uzbekistan (general)	120	1067	10996
Including:			
Republic of Karakalpakstan	12	26	1131
Areas:			
Andijan	11	79	455
Bukhara	11	68	1467
Jizzakh	6	42	526
Navoi	7	46	577
Namangan	8	115	391
Samarkand	11	88	1849
Syrdarya	5	25	257
Surkhandarya	8	112	856
Tashkent	16	95	876
Fergana	9	197	1021
Khorezm	3	56	549
Kashkadarya	12	117	1041

Source: UzR. Data from the State Statistics Committee.

The figures in the table show that the number of cities in the regions exceeds 10 in Tashkent, Kashkadarya, Samarkand, Andijan and Bukhara, including the Republic of Karakalpakstan. The least urban settlements are in the Jizzakh, Navoi and Khorezm regions. The figures for the number of settlements show that more than 100 are located in the Fergana, Kashkadarya, Namangan and Surkhandarya regions. Fergana region is recognized as the region with the largest number of cities in the country. We see that the highest rates for rural settlements are in the Samarkand and Bukhara regions, where there are more than a thousand villages. In other provinces, the number of rural settlements is much higher.

Data on the number of settlements serve as the basis for a comparative analysis of changes in geopolitical conditions, economic and social development of regions, prospects for the development of settlement systems in regions. At the same time, the ratio of the number of settlements makes it possible to draw conclusions about the population size, density and methods of economic management in the regions.

Territorial differences in the distribution of the population in a country are reflected in factors such as the process of urbanization, the use of natural resources, history and the positive impact of natural conditions on economic development. Naturally, given the natural conditions and agro climatic features of Uzbekistan, one can imagine a high population density and a large number of settlements in intermountain valleys, river deltas and oases, where irrigated agriculture has been developed since ancient times. Accordingly, with the resettlement of the population in the country, in many respects, factors such as historical and natural conditions have a positive effect on economic development. During the twentieth century, cities became industrial centers, where constant population growth, the discovery of many mineral deposits, the development of

transport, as well as the development of deserts created new settlements, the use of natural resources and the process of urbanization.

The formation of settlements depends on the geocological conditions of natural areas, the specifics of the use of settlements in areas such as deserts, hills, mountains and foothills, or on the use of natural and artificial irrigation systems. Differences in the territorial distribution of the republic's population, population size and density of regions depend on the factors listed above.

**TABLE 3 DISTRIBUTION OF THE POPULATION OF THE REPUBLIC BY REGIONS
(THOUSAND PEOPLE)**

regions	The area is one thousand km. sq.	Total population. (thousand people (2019))	Population density 1 km ² per person	Urban Population	Rural Population	Urbanization level %

Source: UzR. Data from the State Statistics Committee.

As you can see, the most densely populated areas of the country are areas where people have been engaged in agriculture for a long time. At the same time, the regions located in relatively recently developed territories, in particular the Jizzakh region, are in last place in terms of population density, but this does not apply to large desert territories such as Navoi, Bukhara or the river. Karakalpakstan, because the desert part of the Jizzakh region has already been developed and the economic activity of the population is fully formed. Thus, the study of population settlement systems, as well as the relationship of the natural environment in the plains, in the mountains and foothills, reveals the specific aspects of the characteristics of local settlements.

CONCLUSION

By classifying, we can conclude that the population systems on the desert, hilly, mountainous and foothill plains, natural conditions and access to natural resources in these settlements and, consequently, the formation of the economic system, the impact of the population on the environment.

At the same time, the classification of settlements in economic zones and their constituent regions according to the location of settlements in natural zones is of great scientific and practical importance. After all, the consistency of the way of life of the population with the rational use of available natural resources will remain one of the main criteria that determine the economic and social development of our country.

The number and territorial share of areas within the regions can indicate the location of settlements in areas belonging to the regions of the republic in terms of natural territories, first, in general.

Therefore, the description of settlements in Uzbekistan, in accordance with natural conditions, can be divided into separate regions, such as mountains, foothills, plains, deserts, oases. Depending on the size of such territories in the regions of the country and their importance in the formation of the economic system, conclusions can be drawn about the features of the formation and development of settlements.

It was noted that in different natural zones the way of life of the population is formed by natural conditions. Although some regions, such as the Fergana Valley and almost all districts of the Tashkent region, are located in mountainous and foothill regions, the development of regions, the development of settlements and the economic structure of the population are the basis for their differentiation.
